# What to Wear

Personal Protective Equipment, because it works!

1

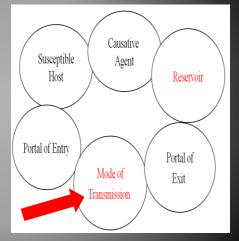

Nebraska Infection Control Network

**Standard Precautions** 

The goal of Infection Prevention is to <u>break</u> the chain of infection

In healthcare we can break the chain by decreasing the pathogens in the environment, on the patient, and on the healthcare worker's hands, clothing

Standard precautions help to decrease transmission of an infectious agent from a reservoir to a susceptible host -Contact is most common mode of transmission (hands and equipment)

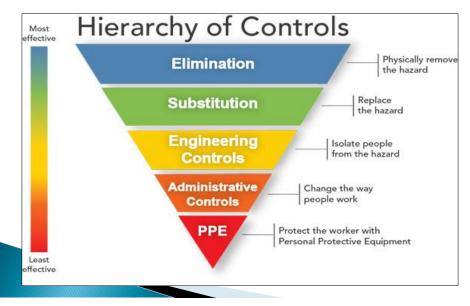

#### **CDC** Guidelines

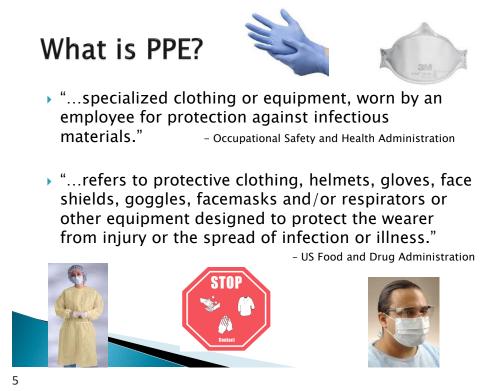

#### CDC Standard Precautions for all patient care:

- -Hand hygiene
- -Personal Protective Equipment (PPE)
- -Respiratory hygiene/cough etiquette
- -Appropriate room placement
- -Proper handling, cleaning, disinfecting of equipment, instruments/devices, environment
- -Proper handling of linens
- -Safe injection practices, proper handling of sharps

#### Hierarchy of Safety and Health Controls

## OSHA requires employers to:

- Identify and provide appropriate PPE for employees.
- Train employees in the use and care of the PPE.
- Maintain PPE, including replacing worn or damaged PPE.
- Periodically review, update and evaluate the effectiveness of the PPE program.

### Appropriate PPE – Clothing & Equipment

- Gloves protect hands
- Gowns/aprons protect skin and/or clothing
- Masks and respirators- protect mouth/nose
- (Respirators protect respiratory tract from airborne infectious agents)
- Goggles protect eyes
- Face shields protect face, mouth, nose, and eyes

# Appropriate PPE

- Standard Precautions
  - For every patient and resident, every interaction
  - Used to protect staff from blood and body fluids
  - Can help with decreasing transmission of pathogens
  - Based on the risk of contact with body fluids
- Transmission Based Precautions
  - For those patients/residents who require Contact, Droplet, or Airborne precautions
  - Required based on type of precautions

### **PPE-Standard Precautions**

#### Gloves

- -Should be worn if you think you may come in contact with blood or body fluids
- -Gloves should be changed with every task you do in each room (minimum after dirty task)
- -Gloves are only as clean as the last thing you touched

#### Gowns

-Wear when providing care if the patient or resident has blood or body fluids that cannot be contained

### **PPE-Standard Precautions**

#### Mouth, Nose, Eye Protection

- -Cover your face, (mucous membranes) if splashing or spraying may be anticipated-this is for all patients/residents
- -During procedures that generate coughing and sprays of respiratory secretions, use face protection that fully covers mucous membranes.
- \*\*This includes suctioning orally or by vent or trach

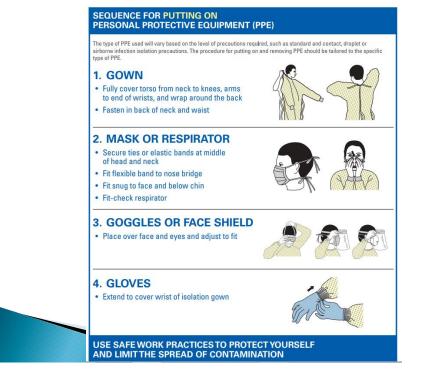

### Sequence for Donning PPE

- Hand Hygiene
- Gown first tie/stick it on
- Mask or respirator over nose and mold to face
- Goggles or face shield
- Gloves select correct size and type

11

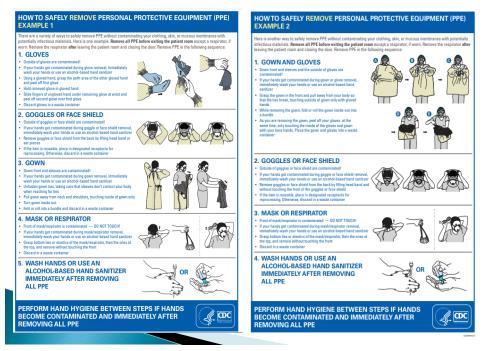

## Sequence for Doffing PPE

- Gloves technique is important
- Goggles or face shield
- Gown
- Mask
- Hand Hygiene

13

# **Key Points About PPE**

- Perform hand hygiene before donning PPE
- Don before contact with the patient, generally before entering the room
- Use carefully don't spread contamination
- Remove and discard carefully, either at the doorway or immediately inside patient room; remove respirator outside room
- Immediately perform hand hygiene

15

# **Recent Research: Auditing**

The study found that only about half of health care workers correctly remove their PPE, and very few remove their PPE in the correct order and dispose of it in the proper location.

•Ongoing education, direct observation and monitoring, written documentation of compliance and type of action for non-compliance are key components of an infection prevention program.

N. Safdar, et al, Variation in health care worker removal of personal protective equipment, *American Journal of Infection Control*, Volume 43, Issue 7 (July 2015)

## Improving Compliance

"Healthcare facilities should use this opportunity of heightened interest (Ebola) to undertake practice improvement focused on PPE removal protocol, including technique, for all healthcare-associated conditions that require the donning and doffing of PPE."

•"There needs to be further education and collaboration within hospitals to improve compliance."

~ N. Safdar

This is true with COVID pandemic as well

**Education-PPE** 

- Educating staff members on how and when to wear PPE is important
  - how to select PPE for Standard Precautions –
  - where to find PPE on unit
  - how to don and doff
  - where to dispose of PPE
  - where to find isolation protocols/procedures
  - $\,^{\circ}\,$  where to find isolation flag in EMR
  - where to find isolation signage on unit
  - $^\circ\,$  who to call if unsure of isolation/PPE need

# **CDC Assessment Tools**

- Acute Care: Supplies necessary for adherence to personal protective equipment recommendations specified under Standard and Transmission-based Precautions (e.g., gloves, gowns, mouth, eye, nose, and face protection) are available and located near point of use.
- Long-term Care: Supplies necessary for adherence to proper PPE use (e.g., gloves, gowns, masks) are readily accessible in resident care areas (i.e., nursing units, therapy rooms).

19

# CMS Survey Tool and PPE

2.C.1 Supplies for adherence to Standard Precautions using personal protective equipment (e.g., gloves, gowns, mouth, eye, nose, and face protection) are available and located near point of use.

YES NO

# Auditing Use of PPE

#### You should audit the use of PPE:

- Proper PPE for task
- PPE accessibility, at point of care
- Proper doffing of PPE and disposal of PPE

#### Audit PPE use while rounding or monitoring IP practices

- Reprocessing
- Surgical procedures
- Blood glucose monitoring
- Foley insertion, maintenance and care
- · Central line insertion, maintenance and care
- Environmental rounding

21

#### Auditing Tools – Competency

Personal Protective Equipp	nent (PPE) Competency Valio	dation		COMPETENT	YES	NO
	ing and Doffing	aacion		<ol> <li>Remove Mask/Respirator (respirator removed after exit room/closed door);</li> </ol>		
Standard Precautions an	d Transmission Based Precautions					
				<ul> <li>Grasp bottom, then top ties or elastics and remove</li> </ul>		
Type of validation: Return demonstration		Discard in waste container				
Type of validation: Return demonstration		10. Perform Hand Hygiene				
	Other			Doffing PPE: Example 2		
Employee Name:	Job Title:			11. Remove Gown and Gloves:		
COMPETENT YES NO		<ul> <li>Grasp the gown in the front and pull away from your body so that the ties</li> </ul>				
		YES	NO	break, touching outside of gown only with gloved hands		
				<ul> <li>While removing gown, fold or roll the gown inside-out into bundle</li> </ul>	$\vdash$	$\vdash$
Donning PPE:				<ul> <li>While removing gown peel off your gloves at the same time, only touching inside of gloves and gown</li> </ul>		
1. Perform Hand Hygiene				Discard in waste container		
2. Don Gown:						
<ul> <li>Fully covering torso from neck to knees, and</li> </ul>	rms to end of wrists			12. Remove Goggles/face shield     Bemove from back by lifting head band		
Tie/fasten behind neck and waist						
3. Don Mask/Respirator:				Discard in waste container		
<ul> <li>Secure ties/elastic bands at middle of it</li> </ul>	nead and neck			13. Mask or Respirator		
Fit flexible band to nose bridge				Grasp bottom ties or elastic of mask/respirator, then top and remove     Discard in waste container		
<ul> <li>Fit snug to face and below chin (Fit-check respirator if applicable)</li> </ul>				14. Perform Hand Hygiene		
4. Don Goggles or Face Shield:						
<ul> <li>Place over face and eyes; adjust to fit</li> </ul>				Standard Precautions & Transmission Based Precautions		
5. Don Gloves:		-		15. Staff correctly identifies the appropriate PPE for the following scenarios:		
<ul> <li>Extend to cover wrist of gown</li> </ul>				Additional PPE to be worn based on standard precautions guidelines (anticipated level of exposure) *		
		-	-	Contact/Contact Enteric Precautions (gown & gloves)		
Doffing PPE: Example 1				Contact/contact enteric precautions (gown & gioves)     Droplet Precautions (surgical mask)		
6. Remove Gloves:				Airborne Precautions (fit-tested respirator if applicable)		
<ul> <li>Grasp outside of glove with opposite glove hand: peel off</li> </ul>				<ul> <li>Enhanced Barrier Precautions (gown &amp; gloves for high contact activities)</li> </ul>		
		_		RECOMMENDED IN NURSNING HOME SETTINGS ONLY		
Hold removed glove in gloved hand     Slide fingers of ungloved hand under rema	loing gloup at wrist	-	+ - 1			
Side ingers of ungloved hand under rema     Peel glove off over first glove	ining giove at wrist			*NOTE: Examples include mask for coughing/vomiting patient, goggles/face shield for in	igating	drainir
Discard gloves in waste container		-		wound, gown for dressing change if scrubs may touch patient, etc.,		
7. Remove Goggles or Face Shield:		_		Comments or follow up actions:		
Handle by head band or earpieces		-				
<ul> <li>Discard in designated receptacle if re-proc</li> </ul>	essed or in waste container	_				
8. Remove Gown:	essea or in maste container	-				
Unfasten ties/fastener						
<ul> <li>Pull away from neck and shoulders, touch</li> </ul>	ing inside of gown only					
<ul> <li>Turn gown inside out</li> </ul>					/	
<ul> <li>Fold or roll into bundle and discard</li> </ul>				Employee Signature Validator Signature	Date
